

ALQUERFEED ANTITOX PLUS

DESCRIPTION

Mycotoxin binder, probiotic and vitamin B in premix powder.

TECHNICAL PROPERTIES

ALQUERFEED ANTITOX PLUS is composed of silicates and probiotic microorganisms that replace the natural flora supplemented with vitamins B.

Silicates are chemical compounds with an structure capable to retain the three-dimensional structure of mycotoxins, preventing them from being absorbed in the digestive tract. Upon contact with the mycotoxins, they form hydrogen bonds with mycotoxins. Mycotoxins bonded to silicates pass through the intestinal tract of the animals without causing lesions in the intestinal walls (enteritis) and without being absorbed (mycotoxicosis). **ALQUERFEED ANTITOX PLUS** is composed of silicates that act as mycotoxin binders. Calcium, aluminum and sodium ions are inserted in the structure of the silicate, increasing its capacity to bind mycotoxins as they provide the suitable distances between the oxygen molecules to form the hydrogen bonds.

ALQUERFEED ANTITOX PLUS does not absorb in its structure nutrients like vitamins, enzymes neither pharmaceuticals.

ALQUERFEED ANTITOX PLUS contains probiotic microorganisms that replace the natural intestinal flora. Probiotics are natural substitutes of the intestinal flora. Their activity is based on intestinal spaces colonization, medium acidifying and digestive enzymes and bacteriokines production. This leads to repopulation of intestinal habitat, inhibition of pathogen growth, and, finally, to an improvement of the feed digestibility.

INDICATIONS AND SPECIES

ALQUERFEED ANTITOX PLUS is intended for all species and ages to bind mycotoxins in order to avoid enteritis and mycotoxicosis caused by the ingestion of contaminated feed, and to repopulate the intestinal flora.

COMPOSITION

<i>Lactobacillus acidophilus</i>	5 x10 ⁸ fcu
Vitamina B1	5000 mg
Vitamina B2	500 mg
Vitamina B6	2500 mg
Vitamina B12	5 mg
Complex aluminum-sodium-calcium silicate hvdrated to 1 kg

DOSAGE

Preventive, in low-contaminated feed, 0.5- 1 kg/ ton.

Preventive in feed of poor quality, add 1.5 to 2 kg/ton.

In highly contaminated feed, add 2.5 kg/ton of feed.

In farms with illnesses caused by mycotoxicosis or enteritis add 5 kg per ton for at least 5 days.

PACKAGING

Bags of 25 kg.
