

CLOXIBIOL L.A.

DESCRIPTION

Oxytetracycline in injectable solution.

TECHNICAL PROPERTIES

Oxytetracycline is a natural tetracycline with a wide spectrum that is quickly absorbed after its intramuscular injection (30 minutes). Its diffusion and tissular penetration is good. After four hours its maximum concentration is reached and the antibiotic activity is maintained for 36- 48 hours. It is a bacteriostatic antibiotic that inhibits the bacterial protein synthesis at ribosome level..

INDICATIONS AND SPECIES

Intended for pigs, sheep, goats and cattle in the treatment of:

- Pigs: pneumonia, diarrhoea, mastitis, pasteurellosis, rhinitis, metritis and actinobacillosis.
- Sheep and goats: pneumonia, chlamydiosis, mastitis, metritis, footrot and actinobacillosis.
- Cattle: pneumonia, diarrhoea, mastitis, metritis, omphalitis and actinobacillosis.

COMPOSITION

Oxytetracycline 200 mg
Excipient to 1 ml

DOSAGE

It is administered by intramuscular injection at doses of 1 ml per 10 k.l.w. every 72 hours, with a treatment period of 4 to 6 days, depending on the veterinary criteria.

INCOMPATIBILITIES

Do not mix with calcium salts. Do not administer together with bactericidal antibiotics.

CONTRAINDICATIONS

Do not administer to animals with hepatic or renal alterations, or during the last third of the pregnancy.

PACKAGING

100 ml and 250 ml glass vials.

WITHDRAWAL PERIOD

Meat: 21 days.

Milk: cattle: 7 days. Do not use the milk of small ruminants for human consumption.
